

HARNESS THE POWER OF 4G LTE TO FUEL BUSINESS GROWTH

Get the advantage of a secure and high-performance enterprise network virtually anywhere in the country.

With Reliance Branch Connect, India's first 4G Enterprise VPN Solution, you can quickly extend your Enterprise Private Network to sites virtually anywhere in the country.

As your business goes looking for newer markets and extends its presence, you don't have to go looking all over for connectivity. With **Reliance Branch Connect**, extending your enterprise network to sites close to customer locations is quick, secure and effortless.

No matter where your customers are located, you DON'T have to be content with unsecured, unreliable and unpredictable connectivity anymore. **Reliance Branch Connect** gets your all business locations quickly connected to your enterprise MPLS VPN powered by Reliance's private and secure network. What's more, you get enterprise-grade features with the convenience of high-uptime wireless connectivity.

HOW IT WORKS

Reliance Branch Connect offers private and secure access over the next-gen Reliance 4G network, combining both TDD and FDD technologies to give a superlative experience for enterprises. If your Hybrid/ Private/ Public Cloud site is already connected to Reliance MPLS VPN, all you need for each of the other sites is a plug-and-play **Branch Connect Smart Router**.

As data traffic is carried over a private MPLS VPN with a dedicated APN for each enterprise customer, it stays secure end to end. The service is configured so that usage is restricted to business-relevant corporate applications, and is backed by enterprise-grade performance objectives, reporting, service support and features.

To give your enterprise the power of 4G LTE and get all sites quickly connected to your enterprise private network with **Reliance Branch Connect**, get in touch with us today.
